Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwade et al (5179764) in view of Beveridge (4837908).

Iwade teaches a drafting arrangement for spinning groups with at least one upper roller carrier and weighting arm held by a machine frame with rollers rotatably mounted in a guide of a bearing element transversely to their axis of rotation (Figures). While Iwade essentially teaches the invention as detailed, he fails to specifically teach a holding device in the design of a collar behind the guide of the bearing element which would result in an electrically conductive connection being created, which Beveridge teaches (Figure 5). It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have utilized such a collar, so as to retain the roller within the bearing in a secure manner. The ordinarily skilled artisan would have known the benefits of such a collar and understood to use one, thus retaining the roller as desired.

### ***Allowable Subject Matter***

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
